Effects of Methylphenidate on Executive Functions

Question:

Do psychostimulants like Methylphenidate (MPH) help your cognitive functions, or do they impair them?

Study Format:

- 15-min in-person information session
- Two 1-hour testing sessions (one month apart)
- Before 1 session, you'll be asked to take a low dose of MPH, & before the other session, a placebo (Vitamin C).
- Testing sessions involve computer games requiring reasoning, attention, and memory.
